

img2num::image\_to\_svg

```
graph LR; A[img2num::image_to_svg] --> B[img2num::bilateral_filter]
```

The diagram illustrates a sequence of two function calls. The first call, 'img2num::image\_to\_svg', is shown in a white box with a black border. A blue arrow points from this box to a second box, 'img2num::bilateral\_filter', which has a gray background and a black border. This suggests that the output of the first function is used as an input for the second.
